

Amendment to the Abstract:

The Abstract has been amended. A revised Abstract is attached.

~~The invention relates to a A device for intermittent compression of human~~
extremities such as, for instance, the region of the calves, to assist the return of body fluid in
the direction of the heart. The device comprises a cuff and a pressure generator, which
intermittently pressurizes the cuff, the cuff comprising in the direction of return a width of
maximally 25-~~cm~~ centimeters. The device further comprises a pressure generator that can be
secured directly to the cuff or secured to the body or to clothing. ~~A-This~~ highly compact, handy
configuration enables mobile application of the device in every-day situations to assist physical
well-being.
